HTTP/2 offers many benefits over HTTP/1.1, including binary headers and multiplexing. <u>Learn more about HTTP/2</u>. [LCP] FCP

#### Use video formats for animated content

Large GIFs are inefficient for delivering animated content. Consider using MPEG4/WebM videos for animations and PNG/WebP for static images instead of GIF to save network bytes. <u>Learn more about</u> efficient video formats FCP [LCP]

Remove duplicate modules in JavaScript bundles

Remove large, duplicate JavaScript modules from bundles to reduce unnecessary bytes consumed by network activity. [FCP] [LCP]

● Uses efficient cache policy on static assets — 0 resources found

A long cache lifetime can speed up repeat visits to your page. <u>Learn more about efficient cache</u> policies.

Avoids an excessive DOM size — 141 elements

A large DOM will increase memory usage, cause longer <u>style calculations</u>, and produce costly <u>layout</u> reflows. Learn how to avoid an excessive DOM size. TBT

^

### User Timing marks and measures

Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. <u>Learn more about User Timing marks</u>.

## ● JavaScript execution time — 0.7 s

Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. <u>Learn how to reduce Javascript execution time</u>. <u>TBT</u>

URL	Total CPU Time	Script Evaluation	Script Parse
localhost 1st Party	849 ms	610 ms	12 ms
deps/react-dom_client.js?v=a9fb8d41 (localhost)	501 ms	465 ms	2 ms
/rides (localhost)	208 ms	13 ms	9 ms
deps/chunk-74OVJCVR.js?v=a9fb8d41 (localhost)	141 ms	132 ms	1 ms
Unattributable	507 ms	31 ms	0 ms
Unattributable	507 ms	31 ms	0 ms

### Minimizes main-thread work — 1.5 s

Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. <u>Learn how to minimize main-thread work TBT</u>

Category	Time Spent
Other	660 ms
Script Evaluation	648 ms
Style & Layout	96 ms

 $\wedge$ 

Category	Time Spent
Script Parsing & Compilation	26 ms
Parse HTML & CSS	15 ms
Rendering	12 ms
Garbage Collection	10 ms

All text remains visible during webfont loads

Leverage the font-display CSS feature to ensure text is user-visible while webfonts are loading. Learn more about font-display.

Lazy load third-party resources with facades

Some third-party embeds can be lazy loaded. Consider replacing them with a facade until they are required. <u>Learn how to defer third-parties with a facade</u>. (TBT)

Largest Contentful Paint image was not lazily loaded

Above-the-fold images that are lazily loaded render later in the page lifecycle, which can delay the largest contentful paint. <u>Learn more about optimal lazy loading</u>. <u>LCP</u>

Uses passive listeners to improve scrolling performance

Consider marking your touch and wheel event listeners as passive to improve your page's scroll performance. <u>Learn more about adopting passive event listeners</u>.

Avoids document.write()

For users on slow connections, external scripts dynamically injected via document.write() can delay page load by tens of seconds. <u>Learn how to avoid document.write()</u>.

Avoid non-composited animations

Animations which are not composited can be janky and increase CLS. <u>Learn how to avoid non-composited animations</u> <u>CLS</u>

Has a <meta name="viewport"> tag with width or initial-scale

A <meta name="viewport"> not only optimizes your app for mobile screen sizes, but also prevents <u>a</u> 300 millisecond delay to user input. Learn more about using the viewport meta tag.

# Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so manual testing is also encouraged.

#### CONTRAST

▲ Background and foreground colors do not have a sufficient contrast ratio.

Low-contrast text is difficult or impossible for many users to read. <u>Learn how to provide sufficient color contrast</u>.

Failing Elements

These are opportunities to improve the legibility of your content.

#### NAMES AND LABELS

Form elements do not have associated labels

Labels ensure that form controls are announced properly by assistive technologies, like screen readers. <u>Learn more about form element labels</u>.

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

#### BEST PRACTICES

Touch targets do not have sufficient size or spacing.

Touch targets with sufficient size and spacing help users who may have difficulty targeting small controls to activate the targets. <u>Learn more about touch targets</u>.

These items highlight common accessibility best practices.

#### **ADDITIONAL ITEMS TO MANUALLY CHECK (10)**

Hide

Interactive controls are keyboard focusable

^

Custom interactive controls are keyboard focusable and display a focus indicator. <u>Learn how to make custom controls focusable</u>.

Interactive elements indicate their purpose and state

^

Interactive elements, such as links and buttons, should indicate their state and be distinguishable from non-interactive elements. <u>Learn how to decorate interactive elements with affordance hints</u>.

O The page has a logical tab order

. .

Tabbing through the page follows the visual layout. Users cannot focus elements that are offscreen. <u>Learn more about logical tab ordering</u>.

Visual order on the page follows DOM order

. .

DOM order matches the visual order, improving navigation for assistive technology. <u>Learn more about DOM and visual ordering.</u>

O User focus is not accidentally trapped in a region

^

A user can tab into and out of any control or region without accidentally trapping their focus. <u>Learn</u> how to avoid focus traps.

O The user's focus is directed to new content added to the page

^

If new content, such as a dialog, is added to the page, the user's focus is directed to it. <u>Learn how to direct focus to new content</u>.

HTML5 landmark elements are used to improve navigation

Landmark elements (<main>, <nav>, etc.) are used to improve the keyboard navigation of the page for assistive technology. Learn more about landmark elements.

Offscreen content is hidden from assistive technology

^

Offscreen content is hidden with display: none or aria-hidden=true. <u>Learn how to properly hide</u> <u>offscreen content</u>.

Custom controls have associated labels

^

Custom interactive controls have associated labels, provided by aria-label or aria-labelledby. <u>Learn</u> more about custom controls and <u>labels</u>.

Custom controls have ARIA roles

^

Custom interactive controls have appropriate ARIA roles. Learn how to add roles to custom controls.

These items address areas which an automated testing tool cannot cover. Learn more in our guide on <u>conducting an</u> <u>accessibility review</u>.

PASSED AUDITS (22)

Hide

[aria-\*] attributes match their roles

^

Each ARIA role supports a specific subset of aria-\* attributes. Mismatching these invalidates the aria-\* attributes. <u>Learn how to match ARIA attributes to their roles</u>.

[aria-hidden="true"] is not present on the document <body>

^

Assistive technologies, like screen readers, work inconsistently when aria-hidden="true" is set on the document <body>. <a href="Learn how aria-hidden">Learn how aria-hidden affects the document body</a>.

• [role]s have all required [aria-\*] attributes

^

Some ARIA roles have required attributes that describe the state of the element to screen readers. <u>Learn more about roles and required attributes</u>. • [aria-\*] attributes have valid values

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. <u>Learn</u> more about valid values for ARIA attributes.

[aria-\*] attributes are valid and not misspelled

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid names. <u>Learn</u> more about valid ARIA attributes.

Buttons have an accessible name

When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. <u>Learn how to make buttons more accessible</u>.

Image elements have [alt] attributes

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. <u>Learn more about the alt attribute</u>.

[user-scalable="no"] is not used in the <meta name="viewport"> element and the [maximum-scale] attribute is not less than 5.

Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. <u>Learn more about the viewport meta tag.</u>

ARIA attributes are used as specified for the element's role

Some ARIA attributes are only allowed on an element under certain conditions. <u>Learn more about</u> conditional ARIA attributes.

Elements use only permitted ARIA attributes

Using ARIA attributes in roles where they are prohibited can mean that important information is not communicated to users of assistive technologies. <u>Learn more about prohibited ARIA roles</u>.

• [role] values are valid

ARIA roles must have valid values in order to perform their intended accessibility functions. <u>Learn more about valid ARIA roles.</u>

Document has a <title> element

The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. <u>Learn more about document titles</u>.

<html> element has a [lang] attribute

If a page doesn't specify a lang attribute, a screen reader assumes that the page is in the default language that the user chose when setting up the screen reader. If the page isn't actually in the default language, then the screen reader might not announce the page's text correctly. Learn more about the language attribute.

<html> element has a valid value for its [lang] attribute

Specifying a valid <u>BCP 47 language</u> helps screen readers announce text properly. <u>Learn how to use the lang attribute</u>.

Links have a discernible name

Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. <u>Learn how to make links accessible</u>.

Lists contain only elements and script supporting elements (<script> and <template>).

Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. <u>Learn more about proper list structure</u>.

List items (<1i>) are contained within , or <menu> parent elements

Screen readers require list items () to be contained within a parent , or <menu> to be announced properly. Learn more about proper list structure.

Select elements have associated label elements.

^

Form elements without effective labels can create frustrating experiences for screen reader users. <u>Learn</u> more about the select element.

Heading elements appear in a sequentially-descending order

^

Properly ordered headings that do not skip levels convey the semantic structure of the page, making it easier to navigate and understand when using assistive technologies. <u>Learn more about heading order</u>.

Uses ARIA roles only on compatible elements

^

Many HTML elements can only be assigned certain ARIA roles. Using ARIA roles where they are not allowed can interfere with the accessibility of the web page. <u>Learn more about ARIA roles</u>.

Deprecated ARIA roles were not used

^

Deprecated ARIA roles may not be processed correctly by assistive technology. <u>Learn more about deprecated ARIA roles</u>.

Image elements do not have [alt] attributes that are redundant text.

^

Informative elements should aim for short, descriptive alternative text. Alternative text that is exactly the same as the text adjacent to the link or image is potentially confusing for screen reader users, because the text will be read twice. <u>Learn more about the alt attribute</u>.

**NOT APPLICABLE** (32)

Hide

[accesskey] values are unique

. .

Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. <u>Learn more about access keys</u>.

O button, link, and menuitem elements have accessible names

When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn how to make command elements more accessible</u>.

Elements with role="dialog" or role="alertdialog" have accessible names.

ARIA dialog elements without accessible names may prevent screen readers users from discerning the purpose of these elements. <u>Learn how to make ARIA dialog elements more accessible</u>.

O [aria-hidden="true"] elements do not contain focusable descendents

Focusable descendents within an [aria-hidden="true"] element prevent those interactive elements from being available to users of assistive technologies like screen readers. <u>Learn how aria-hidden</u> affects focusable elements.

ARIA input fields have accessible names

When an input field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn more about input field labels</u>.

ARIA meter elements have accessible names

When a meter element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn how to name meter elements</u>.

ARIA progressbar elements have accessible names

When a progressbar element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn how to label progressbar elements</u>.

Elements with an ARIA [role] that require children to contain a specific [role] have all required children.

Some ARIA parent roles must contain specific child roles to perform their intended accessibility functions. <u>Learn more about roles and required children elements</u>.

<ul> <li>[role]s are contained by their required parent element</li> </ul>	^
Some ARIA child roles must be contained by specific parent roles to properly perform their intended accessibility functions. Learn more about ARIA roles and required parent element.	nded
<ul> <li>Elements with the role=text attribute do not have focusable descendents.</li> </ul>	^
Adding role=text around a text node split by markup enables VoiceOver to treat it as one phrabut the element's focusable descendents will not be announced. Learn more about the role=teattribute.	
ARIA toggle fields have accessible names	^
When a toggle field doesn't have an accessible name, screen readers announce it with a generic making it unusable for users who rely on screen readers. <u>Learn more about toggle fields</u> .	name,
<ul> <li>ARIA tooltip elements have accessible names</li> </ul>	^
When a tooltip element doesn't have an accessible name, screen readers announce it with a gen name, making it unusable for users who rely on screen readers. <u>Learn how to name tooltip ele</u>	
ARIA treeitem elements have accessible names	^
O ARIA treeitem elements have accessible names  When a treeitem element doesn't have an accessible name, screen readers announce it with a general name, making it unusable for users who rely on screen readers. Learn more about labeling tree elements.	generic
When a treeitem element doesn't have an accessible name, screen readers announce it with a gramman, making it unusable for users who rely on screen readers. Learn more about labeling trees.	generic

When a treeitem element doesn't have an accessible name, screen readers announce it with a gename, making it unusable for users who rely on screen readers. Learn more about labeling tree elements.  O The page contains a heading, skip link, or landmark region  Adding ways to bypass repetitive content lets keyboard users navigate the page more efficiently	generic item ^
When a treeitem element doesn't have an accessible name, screen readers announce it with a gramme, making it unusable for users who rely on screen readers. Learn more about labeling tree elements.  The page contains a heading, skip link, or landmark region  Adding ways to bypass repetitive content lets keyboard users navigate the page more efficiently more about bypass blocks.	generic item  . Learn ents. ^
When a treeitem element doesn't have an accessible name, screen readers announce it with a gramme, making it unusable for users who rely on screen readers. Learn more about labeling trees elements.  O The page contains a heading, skip link, or landmark region  Adding ways to bypass repetitive content lets keyboard users navigate the page more efficiently more about bypass blocks.  O <a href="https://doesne.com/displays/displays/">displays/</a> contain only properly-ordered <a href="https://displays/displays/">dtemplate</a> or <a href="https://displays/displays/">displays/</a> contain only properly-ordered <a href="https://displays/displays/">dtemplate</a> or <a href="https://displays/displays/">displays/</a> displays/ <a href="https://displays/">displays/<a href="https://displays/">https://displays/<a href="https://displays/">displays/<a href="https://displays/">https://displays/<a href="https://displays/">https://displays/<a href="https://displays/">https://displays/<a href="https://displays/">https://displays/<a href="https://displays/">Addisplays/<a href="https://displays/">https://displays/<a href="https://displays/">https://displays/<a href="https://displays/">https://displays/<a href="https://displays/">http</a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a></a>	generic item  . Learn ents. ^

O ARIA IDs are unique	^
The value of an ARIA ID must be unique to prevent other instances from being overlooked by assistechnologies. <u>Learn how to fix duplicate ARIA IDs</u> .	stive
O No form fields have multiple labels	^
Form fields with multiple labels can be confusingly announced by assistive technologies like screen readers which use either the first, the last, or all of the labels. <u>Learn how to use form labels</u> .	n
<frame/> or <iframe> elements have a title</iframe>	^
Screen reader users rely on frame titles to describe the contents of frames. Learn more about fram titles.	<u>1e</u>
<html> element has an [xml:lang] attribute with the same base language as the [lang] attribute.</html>	^
If the webpage does not specify a consistent language, then the screen reader might not announc page's text correctly. Learn more about the lang attribute.	e the
O Input buttons have discernible text.	^
Adding discernable and accessible text to input buttons may help screen reader users understand purpose of the input button. <u>Learn more about input buttons</u> .	the
<pre><input type="image"/> elements have [alt] text</pre>	^
When an image is being used as an <input/> button, providing alternative text can help screen reausers understand the purpose of the button. Learn about input image alt text.	ader
O Links are distinguishable without relying on color.	^
Low-contrast text is difficult or impossible for many users to read. Link text that is discernible impr the experience for users with low vision. <u>Learn how to make links distinguishable</u> .	oves
The document does not use <meta http-equiv="refresh"/>	^
Users do not expect a page to refresh automatically, and doing so will move focus back to the top the page. This may create a frustrating or confusing experience. Learn more about the refresh met tag.	

O <object> elements have alternate text</object>	^
Screen readers cannot translate non-text content. Adding alternate text to <object> elements help screen readers convey meaning to users. Learn more about alt text for object elements.</object>	)S
O Skip links are focusable.	^
Including a skip link can help users skip to the main content to save time. Learn more about skip lin	<u>ks</u> .
No element has a [tabindex] value greater than 0	^
A value greater than 0 implies an explicit navigation ordering. Although technically valid, this often creates frustrating experiences for users who rely on assistive technologies. Learn more about the <u>tabindex attribute</u> .	
<ul> <li>Tables have different content in the summary attribute and <caption>.</caption></li> </ul>	^
The summary attribute should describe the table structure, while <caption> should have the onscribe. Accurate table mark-up helps users of screen readers. Learn more about summary and caption</caption>	
O Cells in a  element that use the [headers] attribute refer to table cells within the same table	<u>.</u> ^
Screen readers have features to make navigating tables easier. Ensuring  cells using the [headers] attribute only refer to other cells in the same table may improve the experience for scre reader users. Learn more about the headers attribute.	en
elements and elements with [role="columnheader"/"rowheader"] have data cells they describe	. ^
Screen readers have features to make navigating tables easier. Ensuring table headers always refer to some set of cells may improve the experience for screen reader users. Learn more about table head	
O [lang] attributes have a valid value	^
Specifying a valid <u>BCP 47 language</u> on elements helps ensure that text is pronounced correctly by a screen reader. <u>Learn how to use the lang attribute</u> .	
video> elements contain a <track/> element with [kind="captions"]	^
When a video provides a caption it is easier for deaf and hearing impaired users to access its information. <u>Learn more about video captions</u> .	

### **GENERAL**

Browser errors were logged to the console

Errors logged to the console indicate unresolved problems. They can come from network request failures and other browser concerns. <u>Learn more about this errors in console diagnostic audit</u>

Detected JavaScript libraries

All front-end JavaScript libraries detected on the page. <u>Learn more about this JavaScript library</u> <u>detection diagnostic audit</u>.

Name	Version
Leaflet	1.9.4

### TRUST AND SAFETY

Ensure CSP is effective against XSS attacks

A strong Content Security Policy (CSP) significantly reduces the risk of cross-site scripting (XSS) attacks. <u>Learn how to use a CSP to prevent XSS</u>

Description	Directive	Severity
No CSP found in enforcement mode		High

# Use a strong HSTS policy

Deployment of the HSTS header significantly reduces the risk of downgrading HTTP connections and eavesdropping attacks. A rollout in stages, starting with a low max-age is recommended. <u>Learn more about using a strong HSTS policy.</u>

Description	Directive	Severity
No HSTS header found		High

# Ensure proper origin isolation with COOP

The Cross-Origin-Opener-Policy (COOP) can be used to isolate the top-level window from other documents such as pop-ups. <u>Learn more about deploying the COOP header.</u>

Description	Directive	Severity
No COOP header found		High

# Mitigate clickjacking with XFO or CSP

The X-Frame-Options (XFO) header or the frame-ancestors directive in the Content-Security-Policy (CSP) header control where a page can be embedded. These can mitigate clickjacking attacks by blocking some or all sites from embedding the page. <u>Learn more about mitigating clickjacking</u>.

Description	Severity
No frame control policy found	High

PASSED AUDITS (13)

Uses HTTPS

All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding <u>mixed content</u>, where some resources are loaded over HTTP despite the initial request being

served over HTTPS. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. <u>Learn more about HTTPS</u>.

Avoids deprecated APIs

^

Deprecated APIs will eventually be removed from the browser. Learn more about deprecated APIs.

Avoids third-party cookies

^

Third-party cookies may be blocked in some contexts. <u>Learn more about preparing for third-party</u> <u>cookie restrictions</u>.

Allows users to paste into input fields

^

Preventing input pasting is a bad practice for the UX, and weakens security by blocking password managers. Learn more about user-friendly input fields.

Avoids requesting the geolocation permission on page load

Users are mistrustful of or confused by sites that request their location without context. Consider tying the request to a user action instead. <u>Learn more about the geolocation permission</u>.

Avoids requesting the notification permission on page load

-

Users are mistrustful of or confused by sites that request to send notifications without context.

Consider tying the request to user gestures instead. Learn more about responsibly getting permission for notifications.

Displays images with correct aspect ratio

^

Image display dimensions should match natural aspect ratio. Learn more about image aspect ratio.

Serves images with appropriate resolution

Image natural dimensions should be proportional to the display size and the pixel ratio to maximize image clarity. <u>Learn how to provide responsive images</u>.

Has a <meta name="viewport"> tag with width or initial-scale

A <meta name="viewport"> not only optimizes your app for mobile screen sizes, but also prevents <u>a</u> 300 millisecond delay to user input. Learn more about using the viewport meta tag.

Page has the HTML doctype

Specifying a doctype prevents the browser from switching to quirks-mode. <u>Learn more about the doctype declaration</u>.

Properly defines charset

A character encoding declaration is required. It can be done with a <meta> tag in the first 1024 bytes of the HTML or in the Content-Type HTTP response header. Learn more about declaring the character encoding.

No issues in the Issues panel in Chrome Devtools

Issues logged to the Issues panel in Chrome Devtools indicate unresolved problems. They can come from network request failures, insufficient security controls, and other browser concerns. Open up the Issues panel in Chrome DevTools for more details on each issue.

Page has valid source maps

Source maps translate minified code to the original source code. This helps developers debug in production. In addition, Lighthouse is able to provide further insights. Consider deploying source maps to take advantage of these benefits. <u>Learn more about source maps</u>.

To appear in search results, crawlers need access to your app.

### ADDITIONAL ITEMS TO MANUALLY CHECK (1)

Hide

Structured data is valid

Run the <u>Structured Data Testing Tool</u> and the <u>Structured Data Linter</u> to validate structured data. <u>Learn</u> more about Structured Data.

Run these additional validators on your site to check additional SEO best practices.

#### PASSED AUDITS (6)

Hide

Page isn't blocked from indexing

Search engines are unable to include your pages in search results if they don't have permission to crawl them. Learn more about crawler directives.

Document has a <title> element

^

The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. <u>Learn more about document titles</u>.

Page has successful HTTP status code

Pages with unsuccessful HTTP status codes may not be indexed properly. <u>Learn more about HTTP</u> status codes.

Links have descriptive text

Descriptive link text helps search engines understand your content. Learn how to make links more

accessible.

Image elements have [alt] attributes

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. <u>Learn more about the alt attribute</u>.

Document has a valid hreflang

hreflang links tell search engines what version of a page they should list in search results for a given language or region. Learn more about hreflang.

NOT APPLICABLE (1) Hide

O Document has a valid rel=canonical

Canonical links suggest which URL to show in search results. Learn more about canonical links.
